## DETAILED ACTION

### *Election/Restriction*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 21-25, drawn to a polypeptide of amino acid sequence set forth in SEQ ID NO:2, classified in Class 530, subclass 351.

II. Claims 26-29, drawn to an antibody, which binds to a polypeptide of amino acid sequence set forth in SEQ ID NO:2, classified in Class 530, subclass 387.9.

III. Claims 30-35, drawn to a polynucleotide encoding a polypeptide of amino acid sequence set forth in SEQ ID NO:2, an expression vector, a host cell, and a method of making the polypeptide, classified in Class 435, subclass 69.5.

IV. Claims 36-37, 39, drawn to a method of treatment by administering an agonist to a polypeptide of amino acid sequence set forth in SEQ ID NO:2, Class and subclass undeterminable.

V. Claims 36, 38, 40, drawn to a method of treatment by administering an antagonist to a polypeptide of amino acid sequence set forth in SEQ ID NO:2, classified in Class 424, subclass 139.1.

The inventions are distinct, each from the other because of the following reasons:

Inventions I-III are independent and distinct, each from the other, because they are products which possess characteristic differences in structure and function and each has an independent utility, that is distinct for each invention which cannot be exchanged. The nucleic acid of invention III can be used to make a hybridization probe or can be used in gene therapy as well as in the production of the protein of interest. The protein of invention I can be used as a

Art Unit: 1646

probe, or used therapeutically or diagnostically, e.g. in screening. The antibody of invention II can be used to obtain the nucleic acid of Group III, and can also be used in diagnostics, e.g. as a probe in immunoassays.

Inventions III and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the protein can be prepared by materially different processes, such as by chemical synthesis, or obtained from nature using various isolation and purification protocols.

Inventions IV and I-III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together, or they have different modes of operation, or they have different functions, or they have different effects. (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are not disclosed as capable of use together.

Inventions V and I-III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together, or they have different modes of operation, or they have different functions, or they have different effects. (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are not disclosed as capable of use together.

Inventions IV-V are independent and distinct, each from the other, because the methods are practiced with materially different process steps for materially different purposes and each method requires a non-coextensive search because of different starting materials, process steps and goals.

Art Unit: 1646

Having shown that these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and recognized divergent subject matter as defined by MPEP § 808.02, the Examiner has prima facie shown a serious burden of search (see MPEP § 803). Therefore, an initial requirement of restriction for examination purposes as indicated is proper.

Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 C.F.R. § 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently-filed petition under 37 C.F.R. § 1.48(b) and by the fee required under 37 C.F.R. § 1.17(h).
